

Back to School

Even though we are still in the hot days of summer in North America, ZYGO Industries, Inc. is gearing up for the fall when students go back to school.

Let us give you a few ideas so you can start school with our speech generating devices.

Please contact ZYGO Customer Service, your local area representative, or our authorized dealers to arrange an in-service demonstration of, or support for, any of our AAC and AT products.

Product Highlights

Talara 32

This simple communication device has four levels, direct and switch scanning access, and flexible size key patterns making it easily customizable for both children and adults with wide ranging abilities and needs. It is similar in many respects to the popular ZYGO Macaw, however the Talara is easier to set up and use. This is a capable device when you don't want to pay for features you won't be using.

Optimist 3

Dynamic display built with XP power, this lightweight communication device is worthy of a close look.

ZYGO's Optimist 3 comes complete with software of your choosing. Try SDP with Boardmaker or the Grid with PCS symbols for a powerful augmentative and alternative communication (AAC) aid that is ideal for users who need speed. Carrying this three pound device by its convertible handle stand is easy. The Crusoe™ TM5800

1 GHz processing speed makes message selection fast. Supplied with USB keyboard and mouse.

Macaw 5

The latest in a long line of MACAWs, this is the ultimate in digital recording communication aids. It has 78 minutes of high-quality recording time on 32 levels (pages), key patterns from two to 32 cells per page, and each page can use a unique key pattern. Also, use key-linking to sequence characters together.

It uses four AA batteries, which can be rechargeable or field replaceable. Overlays are now held on with a magnetic, hinged key surround.

There are many set-ups on the MACAW to accommodate individual needs over time. It utilizes both direct selection and scanning (including auditory scanning) and a novel, simple "Morse code" access to all keys and functions.

Its ruggedness, light weight and small size make the MACAW easy to carry, and its wedge shape

provides a comfortable slope for access to the keyboard from a flat surface.

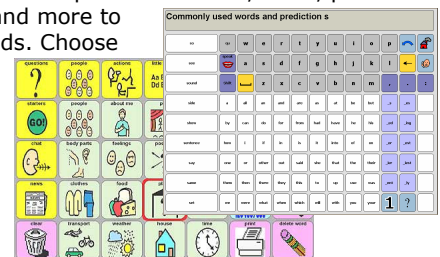

The Grid as a communication aid

The Grid is an easy and powerful dynamic display communication system.

Creating and editing grids is fast — just type the message and the symbol and cell options are determined for you. The Grid comes with a growing range of ready made grids to start the user off. You can add-on Word Power or build a unique set by yourself.

Flexible appearance options for colors, fonts, picture size, cell spacing and more to suit the user's needs. Choose

any symbol set or use digital photos to enhance pages. Just capture the image from the screen or use your personal photos.

Print overlays for digitized communication aids or backups when dynamic display devices are not available. You can send infrared signals directly from your communication pages for aids to daily living.

Contact us for a free Grid demo CD.
